

The Council for Quality Growth promotes balanced and responsible growth in the metro Atlanta region and state by:

- Promoting long range planning and adequate delivery of government services;
- Serving as a catalyst for consensus on growth issues; and
- Providing a forum for discussion of responsible development, and economic or technical expertise as needed.

Our legislative agenda has historically focused on long-term investments in the regional transportation network; water and land use and environmental regulations; and policies that support economic development. Council membership has specifically encouraged the continued pursuit of long-term transportation funding with a particular focus on transit and connectivity across the region. Considering this, the Council for Quality Growth's legislative platform includes:

Transportation

- Support measures to expand and streamline the operation of metro Atlanta's transit systems and those across the state.
- Support policies that seek to enhance Georgia's freight & logistics infrastructure.
- Support state funding allocation to Georgia Department of Transportation's Freight Rail Program, project recommendations from E-Commerce & Freight Infrastructure Funding Commission, and the strategic planning and funding mechanisms for updating and expanding the state's transportation infrastructure.
- Support increased funding to the Georgia Transportation Infrastructure Bank (GTIB), with additional investment specifically directed to projects sponsored by Community Improvement Districts and/or local governments.
- Support legislation that authorizes Community Improvement Districts, Development Authorities, and Local Workforce Development Boards to convene Board meetings by teleconference to ensure business continuity.
- Support the continued investment in electric vehicle infrastructure and innovations in transportation technology to keep moving the state forward.
- Support state funding to pilot emerging mobility solutions in communities throughout Georgia.
- Support efforts to identify and eliminate legal or regulatory impediments to incentivize the growth of public-private partnerships and other privately financed alternatives.
- Oppose any legislation that seeks to repeal any portion of House Bill 170, the "Transportation Funding Act of 2015".

Water, Land Use and Environmental Regulation

- Promote effective water management policy to ensure adequate sources of clean water to meet the needs of Georgia's growing population and businesses.
- Support legislation that allows for greater flexibility in use of land that has water bodies on it and encourage efficiency in the permitting process.
- Continue support of the Metropolitan North Georgia Water Planning District, including additional funding to ensure adequate sources of clean water for metro Atlanta's future growth and quality of life.
- Continue support of the existing brownfield programs, including additional funding.
- Support policies to improve the state's stormwater management practices to enhance water quality, mitigate flooding, and ensure our continued quality of life.
- Support legislation that enables the industry's ability to develop in a quality and cost-effective manner.

Economic Development and Job Creation

- Advocate for legislation that creates enhanced tax incentives to encourage redevelopment of land not being properly utilized and for business growth.
- Support legislation that incentivizes 21st century infrastructure and promotes investment in Georgia's economy.
- Support legislation that focuses on economic development tools and incentives, new planning models and zoning codes, and new housing types, to enable the development of more workforce and affordable housing. Support safe and affordable options for alternative building materials and methods, and flexible building codes that don't over-restrict industry options.
- Support legislative initiatives that create, recruit, and expand Georgia's workforce to promote economic mobility and prosperity.
- Support any legislation that continues or enhances the current structure and functions of Community Improvement Districts and Development Authorities.
- Promote policies that would positively impact our business climate and are not discriminatory in nature.
- Oppose legislation that imposes additional restrictions on the development, banking, and business communities.
- Oppose legislation that infringes on Georgia citizens' property rights.
